

11:40 PM • THANE

“Papa collapsed.
They've taken him to the ICU.”

The billing desk wants a ₹80,000 deposit — right now.

Meet Neha, 29

Product analyst in Powai. Has health insurance, a salary account, mutual funds — and four finance apps.

11:40

Friday night

Mummy

3 missed calls

City Hospital, Thane

Admission deposit: ₹80,000

Reminder

Rent due in 4 days: ₹22,000

Bank

Balance: ₹38,420

Four finance apps. None knows what just happened.

Each app is excellent at its own job. Here is what each one could offer her at 11:40 PM.

 PhonePe Where she bought her health policy	 ICICI Bank app Her salary account	 INDmoney Where she tracks her investments	 Paytm Where she pays for everything
Health insurance Policy active Claims: upload documents, call support	Pre-approved personal loan Full ₹80,000 Money in your account in minutes	Your net worth ₹6.2 lakh Redeem mutual funds	Pay City Hospital ₹80,000 UPI • instant
Open	Open	Open	Open
Sold her the policy	Will lend the full amount	Shows what she owns	Will move the money

Every app answers its own question. **Nobody answers hers: “What do I do right now?”**

Illustrative screens, based on each app's publicly listed features.

She took the loan. It was the wrong answer.

Panic picks the fastest button, not the right one.

- 11:52 PM**
Takes the pre-approved loan for the full ₹80,000.
- 2 days later**
Finds her policy covered ₹55,000 of the bill.
- 12 months**
Pays EMIs on ₹65,000 she never needed to borrow.

Neha was never short of money.

She was short of clarity.

She needed ₹15,000. She borrowed ₹80,000.

FIRST IN INDIA · PROPOSED

Paytm Saathi — Money SOS

One button in the Paytm app for any money emergency. Say what happened; get one approved plan.

“Saathi, madad karo.”

One tap

One story — any language

One plan in < 2 min, or a human calls you

Same night. Same Neha. One sentence.

Replay 11:40 PM with Paytm Saathi.

- 11:41

Tells
Hinglish voice note + photo of the deposit slip. No menus, no forms.
- 11:41

Saathi reads
Her policy from the insurer — wherever she bought it — plus the bill and her consented bank data.
- 11:42

Saathi finds
Cashless covers ₹55,000. She can pay ₹10,000 now. The real gap is ₹15,000.
- 11:43

Saathi compares
Claim + ₹15K plan vs ₹80K loan vs redeeming funds — with cost and risk for each.
- 11:43

Neha approves
Claim filed, ₹15K plan set up, ₹10K paid to the hospital. One live timeline.

Everyone sells a product. Nobody owns the moment.

How the apps on Neha's phone compare at 11:40 PM.

	PhonePe	ICICI Bank	INDmoney	Paytm Saathi
Built around	Payments + a shelf of insurance and loans	Banking across one group's products	Wealth tracking and investing	What just happened to you
Compares claim vs credit vs savings for her case				
Lends only the verified gap, not the full bill				
Neutral across any insurer and any lender				
One story across insurer, lender and hospital				
Acts and tracks until payout and repayment				

● Partly, or only within its own products and partners

Based on publicly listed product features, Oct 2026.

PhonePe sells the umbrella. ICICI lends you a new one. INDmoney tells you what it's worth. Saathi holds it over you when it rains.

Easy to describe. Hard to copy.

Why now

- MCP lets insurers, lenders and hospitals plug in once — not one integration per product.
- Account Aggregator gives consented access to bank data.
- AI can now read policies and bills reliably — with citations.

Why Paytm

- Already present at the payment moment.
- Already shipping AI in the app, an official MCP server and AI agents for businesses.
- Can coordinate partners without being the insurer or lender.

Hard to copy

- One platform, eight problems: a new problem is a playbook, not a project.
- Every resolved case teaches the engine which paths actually work.
- A bank or insurer with its own products can't credibly be neutral. Saathi can.

How Saathi works under the hood

AI reads and explains. Fixed rules move money. Partners plug in through MCP.

ONE PLATFORM, MANY MONEY EMERGENCIES

Two playbooks run live in our build on the same core — the other six reuse it with no new code.

Paytm earns when Neha's problem is solved

Revenue flows through regulated partners, and never decides the ranking.

Insurance

Commission when a real coverage gap is found

Lending

Origination on smaller, exact-gap loans

Payments

More UPI and bill-pay, plus loyalty

Resolution API

Insurers and employers pay to resolve their customers' cases

PILOT TARGETS

< 2 min

to an approved plan

₹65K

less borrowed in a case like Neha's

> 30%

fewer incomplete claims

100%

of actions consented and audited

Guardrail: commission never ranks a recommendation. The customer's outcome does.

11:40 PM · SOMEWHERE IN INDIA · TONIGHT

Tonight, someone's father will be wheeled into an ICU.

They shouldn't need four apps. They should need one sentence.

OUR ASK

A 90-day Money SOS pilot inside the Paytm app — with one insurance partner and one lending partner, starting with hospital bills.

“Life happened? Tell Saathi. We'll handle what's next.”

Thank you
