

Paytm Saathi

An AI financial first-aid network that turns a money emergency into one clear, approved plan.

“Life happened? Tell Saathi. We'll handle what's next.”

What's inside this deck

Structured to the hackathon's PPT guide — every required section, in the same order.

Title Slide

Slide 1

Paytm Saathi · Team Swamit Labs ·
Track 2

01

Problem Statement

Slides 3–4

Money problems arrive as events;
apps sell products.

02

Proposed Solution

Slides 5–8

One conversation, exact-gap maths
and the live demo journey.

03

Technology / Tech Stack

Slides 9–12

AI design, architecture, tech stack
and guardrails.

04

USP

Slides 13–14

A resolution engine, not a chatbot
— and how it differs.

05

Impact & Benefits

Slide 15

Pilot targets and value for
customers, Paytm and partners.

06

Business Model

Slide 16

Paytm earns when the customer's
problem is solved.

+

Execution & Vision

Slides 17–19

Build-day plan, roadmap and the
team.

Money problems arrive as events. Apps sell products.

In the middle of a crisis, the customer has to work out which product fixes their problem.

My father is in hospital. The bill is ₹80,000. I have insurance — but what do I do right now?

3 to 5 separate journeys

Insurer, lender, payment app and support — each with its own forms, rules and ticket numbers.

The same story, told again and again

Repeated to every form, agent and document request while the family waits at the counter.

No single view of the way out

Nothing shows cost, time, risk and the next step in one place — so people over-borrow or delay.

The real gap isn't money. It's knowing the right next step.

India can transact. It still can't resolve.

Access to accounts and payments has scaled. Protection and guidance have not.

~78%

of Indian adults have a bank account

World Bank Global Findex, 2021

131B+

UPI transactions in a single year

NPCI, FY2023-24

~4%

insurance penetration in India

IRDAI Annual Report, FY2022-23

~39%

of health spending is still paid out-of-pocket

National Health Accounts, 2021-22

Rails are built

Safety net is thin

Digital payments answer

“Can I transact?”

Paytm Saathi answers

“What should I do next?”

Why Paytm is the right coordinator

- ✓ Already present at the payment moment for millions of families
- ✓ Distributes insurance and credit through regulated partners
- ✓ Coordinates the journey — never the insurer or lender of record

Paytm Saathi: one conversation replaces 3–5 journeys

The customer describes what happened. The AI finds the best path — and carries it out with their approval.

Saathi understands the policy, the bill, the urgency and the customer's cash position. It works out what is covered, what the real gap is, and the fastest, safest way to close it — then files, pays, funds or escalates, and tracks it to the end.

TELL SAATHI ANY WAY YOU LIKE

Voice

Chat

Bill photo

Policy PDF

English, Hindi or Hinglish · no financial vocabulary needed

THE PROMISE

The customer never has to know which product solves the problem.

Product-neutral

Chooses a claim, payment support, credit or human help based on need — never on commission.

Consent before action

The AI prepares and explains. The customer approves every step that moves money or data.

Measured by outcome

Success means the problem is resolved — not that a product was sold.

From “what happened?” to “it's resolved”

Four steps, one conversation, one timeline.

TRUST BOUNDARY — WHO DOES WHAT

A ₹80,000 hospital bill, resolved in under 2 minutes

The AI prepares and explains, the customer approves, the partner decides.

- 1 Tell**
“Hospital bill ₹80K. What is covered?” — by Hinglish voice note or a photo of the bill.
- 2 Understand**
Reads the policy PDF and the itemised bill; flags a room-rent cap and one missing discharge document.
- 3 Calculate**
Insurance covers ₹55K; the customer can pay ₹10K now. The real gap is ₹15K — not ₹80K.
- 4 Choose**
Claim + 3-month plan vs savings vs full loan, compared side by side. Customer taps Approve.
- 5 Resolve**
Claim filed, gap funded, one live timeline tracks payout and repayment until closed.

₹65K

less borrowed than a full ₹80K loan

1×

story told — every form pre-filled

Illustrative amounts for the demo.

Exact-gap maths, then the resolution graph

Saathi computes the real gap first, then scores every path before recommending one.

Path	Time	Cost	Risk	Effort	Verdict
A • Claim + pay the gap from emergency savings	Fast	No interest	Savings drained	Low	Risky
B • Claim + 3-month payment plan for ₹15K	Fast	Low	Low	Low	✓ Recommended
C • Personal loan for the full ₹80K	Fast	High — interest on ₹80K	Over-borrowing	Medium	Avoid
D • Wait for reimbursement, pay hospital later	Slow	Late fees possible	Discharge delay	High	Avoid

 Weighted score = time + cost + risk + effort, tuned to the customer's urgency. An affordability guardrail blocks any credit the customer's inflows can't safely repay — and paths are never ranked by commission.

AI where it reads and reasons. Rules where money moves.

Six AI components do the understanding; deterministic services own every rupee.

Multimodal intake

Indic speech-to-text (Sarvam AI) plus OCR and a vision LLM turn voice and bill photos into one case.

Event & urgency classifier

Detects event type, urgency and sentiment — sets priority, tone and escalation.

Policy RAG with citations

Clause-level retrieval over the policy PDF; every answer cites the clause it came from.

Bill auditor

Maps each bill line to coverage — room-rent caps, co-pay, non-payable consumables.

Missing-document detector

Checks the claim checklist before filing, cutting incomplete submissions.

Plain-language explainer

Explains every option and claim status in Hindi or English, at the customer's pace.

Deterministic — never the LLM

- ✓ Exact-gap calculator
- ✓ Coverage rules engine
- ✓ Affordability guardrail
- ✓ Payment & partner execution

Hallucination guard

Every ₹ figure the customer sees must trace to a bill line, a policy clause or a calculation. If it can't, Saathi asks — or hands off to a human.

Five-layer architecture

AI recommends and prepares; fixed rules control money movement; regulated partners decide.

END-TO-END FLOW

Built for a live demo today — and real partners tomorrow

Every external call has an offline fallback behind the same interface, so the demo cannot fail.

	Frontend	React · TypeScript · Tailwind · Chart.js · WebSocket live timeline
	Backend	Python · FastAPI · Pydantic · REST + WebSocket · background workers
	AI / NLP	LLM with structured JSON output · LangChain / LlamaIndex · embeddings · intent & sentiment classifier
	Voice	Sarvam AI Indic speech-to-text & text-to-speech · Web Speech API fallback
	Documents	PaddleOCR / Tesseract · PDF text extraction · policy split into cited clauses
	Data	PostgreSQL · pgvector · object storage · Redis
	Integration	Mock Paytm webhook · mock insurer & lender APIs · UPI & BBPS adapter · CRM handoff

REAL IN THE DEMO

- Document AI on real bills & policies
- Policy answers with clause citations
- Hindi / Hinglish voice intake
- Sentiment & urgency detection
- Exact-gap calc & resolution graph
- Journey UI & live timeline

SIMULATED IN THE DEMO

- Insurer and lender decisions
- Claim settlement & payout
- Paytm payment webhook events

Built to be trusted on a family's worst day

Guardrails are product features — visible to the customer, enforced in code, recorded in the audit log.

Consent-gated data & actions

Purpose-bound, revocable consent before reading documents or moving money — aligned with the DPDP Act, 2023.

No commission ranking

Paths are scored on customer outcome only. Partner payouts are invisible to the ranking model.

Affordability guardrail

Blocks credit the customer's inflows can't safely repay; shows the full Key Fact Statement before any loan.

Confidence or a human

Low confidence, high distress or a disputed claim triggers a warm handoff — with the full story attached.

Partners decide

Claims are decided by the insurer; credit by an RBI-regulated lender. Saathi coordinates, never underwrites.

Audit ledger & PII care

Every recommendation, source and approval is logged; PII is redacted before any LLM call.

Not another chatbot. A resolution engine.

Six things no financial app or assistant in India does together today.

Event-first

Starts with “what happened?” — anyone can begin, even in a panic, even without financial vocabulary.

Product-neutral

Chooses claim, payment support, credit or a human — based on need, never on commission.

Exact-gap credit

Lends only the verified uncovered amount (₹15K, not ₹80K) — over-borrowing is designed out.

Tell it once

One explanation fills every form, document request and agent handoff. Nobody asks twice.

Resolution graph

Scores every path by time, cost, risk and effort before acting — and shows the comparison.

Trust ledger

Every recommendation shows the data, policy clause and calculation behind it.

Category it creates: **AI-powered financial resolution** — not financial product discovery.

Today's options solve one piece. Saathi solves the event.

The same money emergency, compared across the tools a family would use today.

	Insurer app	Lending app	Generic AI chatbot	Paytm Saathi
Starts from the life event, not a product	⦿	⊗	⦿	✓
Reads the policy and the bill together, with citations	⦿	⊗	⦿	✓
Compares claim vs credit vs savings for this case	⊗	⊗	⦿	✓
Funds only the verified cash gap	⊗	⊗	⊗	✓
One story across insurer, lender and support	⊗	⊗	⊗	✓
Executes and tracks until payout and repayment	⦿	⦿	⊗	✓

✓ Does it fully

⦿ Partly / only for its own product

⊗ Doesn't

Faster clarity. Safer money decisions.

Proposed targets for the first insurer + lender pilot — measured against partner baselines.

< 2 min

to a personalised action plan

first message → plan

> 30%

fewer incomplete claim submissions

vs insurer baseline

20%

fewer repeat support contacts

per resolved case

100%

recommendations explained & consent-gated

enforced by design

Customers

Less paperwork, faster clarity and safer borrowing in a stressful moment. One story, told once.

Paytm

More completed journeys, higher retention and relevant — not pushy — cross-sell across verticals.

Partners

Complete claims and pre-verified gaps — lower operating, support and credit-risk costs.

India

Fewer avoidable debt spirals; more trust in insurance and formal credit.

Paytm earns when the problem is solved

Revenue flows through regulated partners — and only from resolutions the customer approved.

Insurance

Distribution commission on policies and top-ups — offered only when a real coverage gap is found.

Lending

Origination revenue on exact-gap credit and payment plans from partner lenders. Smaller, safer loans.

Payments

More UPI, BBPS bill-pay and wallet activity — and customers who stay because Saathi helped.

Enterprise API

A Resolution API for insurers and employers to resolve customers' and staff's money problems.

Guardrail: recommendations are never ranked by commission.

What we will ship on hackathon day

A narrow, end-to-end slice — one event, done properly — rather than a wide, shallow demo.

DEMO SUCCESS CRITERIA

From one crisis journey to a money companion for India

Each phase has a clear exit criterion before the next begins.

THE LONG-TERM COMPANION

Paytm already helps India move money.

Paytm Saathi helps India recover when life disrupts it.

Event-first

starts from what happened

Product-neutral

need over commission

Exact-gap

no over-borrowing

Trusted

evidence + consent

“Life happened? Tell Saathi. We'll handle what's next.”

Thank you
